ANCESTRY OF THE ADIRONDACK STRAWBERRY.

ADIRONDACK is the result of scientific breeding, combining the best qualities of the European and American strains of the Strawberry. It does this to a remarkable degree. We do not claim that ADIRONDACK is the ultimate in strawberries, but it is a long step forward on the road to perfection.

ADIRONDACK has fine plant characteristics. It is exceptionally vigorous and hardy. It makes many strong runners, setting them early and spacing them far apart. It bears enormous crops. It is a long season picker. Its fruit is borne on strong stalks. It is self pollinating and it is a Spring bearer not an everbearer.

ADIRONDACK berries are large, deep red all the way through and are solid, yet tender and juicy. They have an attractive, large, bright green calyx or hull. In flavor, they are TOPS, being neither acid nor flat but having a wonderful aroma and a flavor that is like the wild strawberry at its best.

ADIRONDACK plants should not be set too close together. We suggest not less than 2 feet apart in the rows with rows 4 feet apart if possible. When runners start, space each runner 6 inches from any other and when the row has been filled, leaving a walking and picking space, pinch out any excess runner plants. If land on which the plants are set is of moderate fertility, do not fertilize in spring when plants are set as this will induce too many runners. About the middle of August, fertilize heavily with 5-10-10, brooming this off the plant leaves and working it into the soil around the plants.

PRICE OF STRONG, HUSKY, NEW RUNNER PLANTS IS \$1.50 PER EACH 25 SENT POSTPAID ANYWHERE IN U.S.A. OUR PLANTS ARE STATE INSPECTED.

George A. Webster, Ridge View Farm, Glens Falls, N. Y., R. F. D. 1.
